

“The Customer ‘Access’ & 2SQL Stories”

- ‘On A Page’ -

CU2 Global Pty Ltd

ConvertU2 Technologies CU2 International

Does Your Organization have Some or Many of these Attributes?

- Has mission critical applications built using Microsoft Access.
- Has applications built by non-professional developers that have become business essential.
- Are concerned about scalability and performance.
- Have large complex Microsoft Access databases or many concurrent users.
- Need to centralise business data to facilitate disaster recovery and business continuity.
- Has a large number of highly distributed Access applications/databases with corresponding issues of maintenance, management, support, backup, duplication, unknown numbers or which is the latest and most current version of the truth.
- Limited technical options but conversion/rewrite time/cost/complexity considerations driving a feeling of it’s “all too hard”.

Are these some of your Key Business and Technology Drivers?

- Economic efficiencies offered through evolving services, e.g. Cloud based services.
- Need/Desire to deploy and utilize Business Intelligence tools to maximize customer retention; improve support; research and develop new products and markets; etc.
- Adherence and compliance with legal, financial, professional and industry standards.
- Holistic views of a company’s entire corporate data asset, including data mining, to provide essential business insight.
- Creation of new and fresh web based client experiences.
- Evolving Corporate policy driving application and data into centralized corporate repositories.
- Significant management, maintenance and security challenges, as databases are typically copied and shared leading to many uncontrolled, unsynchronized and unauthorized versions.
- Software development and re-engineering of Access applications often become convoluted and inefficient in their design impacting robustness, limiting further development.
- Inefficient use of network bandwidth; performance, concurrent usage and database size limitations in Access.

Then with Access to SQL Server conversions the 2SQL automated conversion process can -

- Reduce the timeframe of conversion and migration programs routinely in excess of 80%.
- Dramatically drive down project costs, approaching a 75% fall in investment levels, through significant reductions in specialist tactical resource requirements and engagement periods.
- Mitigate the conversion risk by rapidly locating and rectifying every known Conversion Issue.
- Achieve an automation outcome of between 95% and 100%, solving multiple occurrences of over 250 unique categories of issues, encompassing 1000’s of distinct issues.
- Reduce deployment timeframes & failure risks by fully automating the deployment process.
- Remove the requirement to retrain Users as the Access User interface remains unchanged.
- Eliminate the need for application re-engineering.
- Deliver exceptional customer experiences such as a recent one where 2SQL converted a database in under 2 hours compared to a manual conversion estimate of 500+ man hours.
